### *Space and Naval Warfare Systems Command Awards Contract*

SAN DIEGO — Lockheed Martin Corp., Eagan, Minn., Science Applications International Corporation, San Diego, and General Dynamics One Source LLC, Taunton, Md., are each being awarded a \$408,791,035 indefinite-delivery indefinite-quantity multiple award contract for Common Afloat Local Area Network Infrastructure (CALI). The purpose of the CALI contracts is to procure shipboard network infrastructure and related engineering support services, mainly in the areas of production, engineering, and common computing environment components. The contracts also provide for engineering support services within these three main areas, to include integrated logistics support; configuration management; test and evaluation; quality assurance; and installation support. Specific requirements will be defined in individual orders issued in a multiple award contract environment.

These contracts include an optional ordering period, which, if exercised, would bring the cumulative value of each contract to an estimated \$502,221,092.

Work will be performed in Eagan, Minn., San Diego and Taunton, Md., and is expected to be completed by May 31, 2014. If the optional ordering period is exercised, work could continue until May 31, 2018.

Contract funds will not expire at the end of the current fiscal year.

This requirement was solicited using full and open competition via the Space and Naval Warfare Systems Command e-Commerce web site and the Federal Business Opportunities web site, with eight offers received. The Space and Naval Warfare System Command, San Diego, is the contracting activity. SPAWAR awarded these contracts on behalf of its organizational partner, the Navy's Program Executive Office for Command, Control, Communication, Computers and Intelligence (PEO C4I), Tactical Networks Program Office (PMW 160). The contract numbers are N00039-10-D-0002, N00039-10-D-0003, N00039-10-D-0004, respectively.
